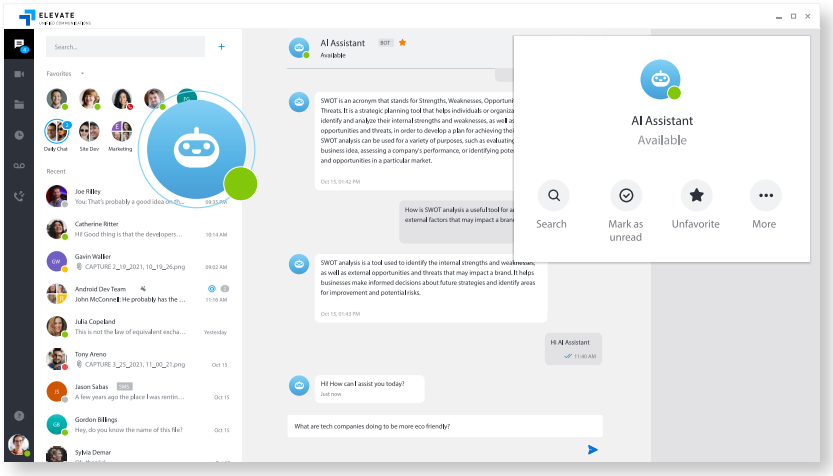
Elevate AI Assistant

Transform workplace productivity and efficiency

AN AI ASSISTANT RIGHT INSIDE ELEVATE

Elevate AI Assistant is a business productivity tool using Generative AI to help employees access information more easily and help with repetitive or time-consuming tasks. And, it's built into the Elevate desktop and mobile application where all business communications and collaboration happens.

AI Assistant can be used for writing content, answering questions, calculating a formula, writing code, translating text, summarizing information, and much more. Because it sits right inside Elevate, users can access it quicker than leaving the app to go to a public Generative AI tool.



AI ASSISTANT BENEFITS

Productive
Increases employee productivity by helping simplify daily tasks.

Accessible
Easily accessible in the desktop and mobile app.

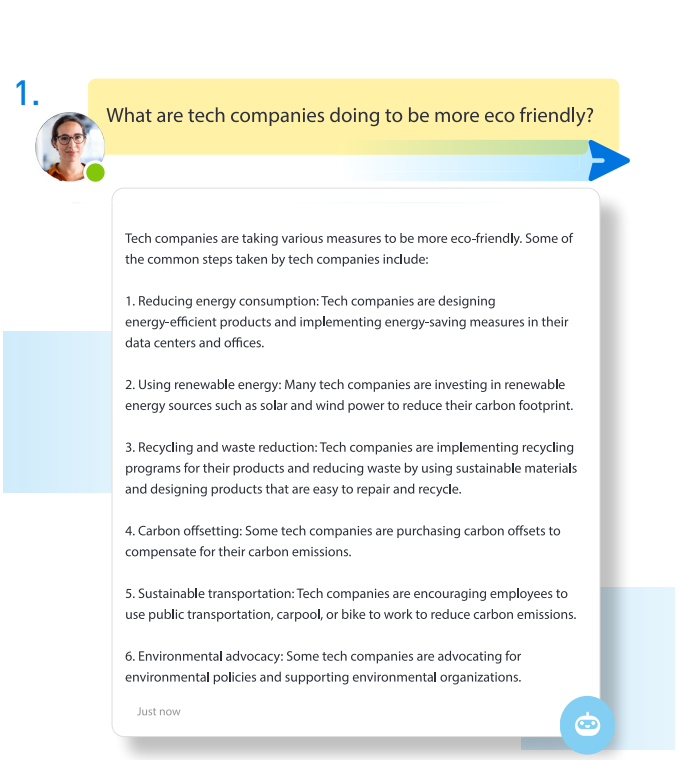
Secure
AI Assistant is designed so your data is not used for training any AI models.*

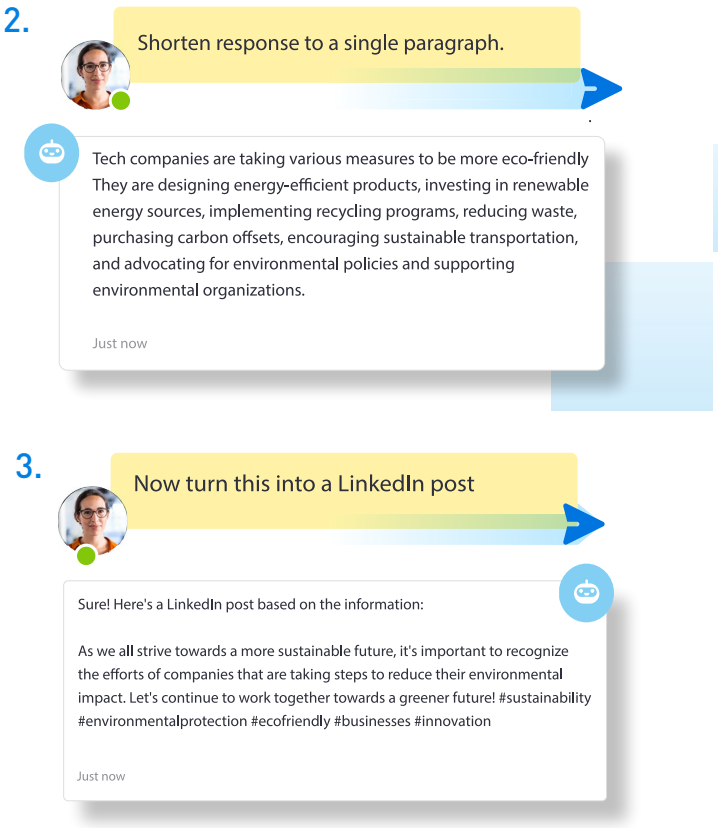
HOW TO USE AI ASSISTANT

Once enabled, AI Assistant will send users a welcome message within 24 hours from the chat tab in Elevate. Be sure to add it to your favorites for easy access.

To get started, simply make a request to AI Assistant in the chat window.

AI Assistant remembers the context from the last three requests a user makes and will remember the last question you asked. You can ask it to be more specific, summarize the response, or change the tone of the answer.





*Please refer to the AI Notification for additional details.
